

## IN THE CLAIMS

Please amend the claims as follows.

For the Examiner's convenience, a list of all claims is included below.

1. (Currently Amended) A machine-implemented method comprising:  
analyzing one or more instructions of a program; and  
modifying the program to expand a register set for a routine in the program transparently to execution of the program that includes adding one or more additional registers to the register set, wherein the one or more additional registers of an expanded register set [[is]] are to store data used to analyze the execution of the program.
2. (Original) The method of claim 1, comprising:  
identifying one or more register moves for the expanded register set; and  
modifying the program to perform the identified one or more register moves.
3. (Original) The method of claim 2, wherein the identifying comprises:  
defining one or more move chains for the expanded register set, and  
identifying a sequence of one or more register moves based on the defined one or more move chains.
4. (Original) The method of claim 1, wherein the modifying the program comprises  
modifying the program to expand a register set for a callee routine of the program.
5. (Original) The method of claim 4, comprising:

modifying the program to expand a register set for a caller routine that is to call the callee routine.

6. (Original) The method of claim 5, wherein the modifying the program to expand a register set for the callee routine comprises modifying the program to expand a register set that includes one or more registers of the register set for the caller routine.

7. (Original) The method of claim 5, comprising:  
identifying one or more register moves for the register set of the caller routine; and  
modifying the program to perform the identified one or more register moves prior to or upon returning from the callee routine to the caller routine.

8. (Original) The method of claim 5, comprising:  
identifying a register move from a register added to the register set for the caller routine to a register added to the register set for the callee routine; and  
modifying the program to perform the identified register move.

9. (Canceled)

10. (Currently Amended) A machine-readable medium having instructions that, if executed by a machine, cause the machine to perform a method comprising:  
analyzing one or more instructions of a program; and  
modifying the program to expand a register set for a routine in the program transparently to execution of the program that includes adding one or more additional registers to the register

set, wherein the one or more additional registers of an expanded register set [[is]] are to store data used to analyze the execution of the program.

11. (Original) The machine-readable medium of claim 10, wherein the method comprises: identifying one or more register moves for the expanded register set; and modifying the program to perform the identified one or more register moves.

12. (Original) The machine-readable medium of claim 11, wherein the identifying comprises:

defining one or more move chains for the expanded register set, and identifying a sequence of one or more register moves based on the defined one or more move chains.

13. (Original) The machine-readable medium of claim 10, wherein the modifying the program comprises modifying the program to expand a register set for a callee routine of the program.

14. (Original) The machine-readable medium of claim 13, wherein the method comprises: modifying the program to expand a register set for a caller routine that is to call the callee routine.

15. (Original) The machine-readable medium of claim 14, wherein the modifying the program to expand a register set for the callee routine comprises modifying the program to expand a register set that includes one or more registers of the register set for the caller routine.

16. (Original) The machine-readable medium of claim 14, wherein the method comprises:  
identifying one or more register moves for the register set of the caller routine; and  
modifying the program to perform the identified one or more register moves prior to or  
upon returning from the callee routine to the caller routine.
17. (Original) The machine-readable medium of claim 14, wherein the method comprises:  
identifying a register move from a register added to the register set for the caller routine  
to a register added to the register set for the callee routine; and  
modifying the program to perform the identified register move.
18. (Canceled)
19. (Currently Amended) A system comprising:  
a processor to execute instructions; and  
a medium having instructions to analyze one or more instructions of a program and to  
modify the program to expand a register set for a routine in the program transparently to  
execution of the program that includes adding one or more additional registers to the register set,  
wherein the one or more additional registers of an expanded register set [[is]] are to store data  
used to analyze the execution of the one or more instructions of the program.
20. (Original) The system of claim 19, the medium having instructions to identify one or  
more register moves for the expanded register set and to modify the program to perform the  
identified one or more register moves.

21. (Original) The system of claim 20, the medium having instructions to define one or more move chains for the expanded register set and to identify a sequence of one or more register moves based on the defined one or more move chains.
22. (Original) The system of claim 19, the medium having instructions to modify the program to expand a register set for a callee routine of the program.
23. (Original) The system of claim 22, the medium having instructions to modify the program to expand a register set for a caller routine that is to call the callee routine.
24. (Original) The system of claim 23, the medium having instructions to modify the program to expand a register set that includes one or more registers of the register set for the caller routine.
25. (Original) The system of claim 23, the medium having instructions to identify one or more register moves for the register set of the caller routine and to modify the program to perform the identified one or more register moves prior to or upon returning from the callee routine to the caller routine.
26. (Original) The system of claim 23, the medium having instructions to identify a register move from a register added to the register set for the caller routine to a register added to the register set for the callee routine and to modify the program to perform the identified register move.
27. (Canceled)
